

Stromag Vector® Couplings

Stromag

Founded in 1932, Stromag has grown to become a globally recognized leader in the development and manufacture of innovative power transmission components for industrial drivetrain applications. Stromag engineers utilize the latest design technologies and materials to provide creative, energy-efficient solutions that meet their customer's most challenging requirements.

Stromag's extensive product range includes flexible couplings, disc brakes, limit switches, an array of hydraulically, pneumatically, and electrically actuated brakes, and a complete line of electric, hydraulic and pneumatic clutches.

Stromag engineered solutions improve drivetrain performance in a variety of key markets including energy, off-highway, metals, marine, transportation, printing, textiles, and material handling on applications such as wind turbines, conveyor systems, rolling mills, agriculture and construction machinery, municipal vehicles, forklifts, cranes, presses, deck winches, diesel engines, gensets and stage machinery.

Altra Motion

Altra is a leading global designer and producer of a wide range of electromechanical power transmission and motion control components and systems. Providing the essential control of equipment speed, torque, positioning, and other functions, Altra products can be used in nearly any machine, process or application involving motion. From engine braking systems for heavy duty trucks to precision motors embedded in medical robots to brakes used on offshore wind turbines, Altra has been serving customers around the world for decades.

Altra's leading brands include **Ameridrives**, **Bauer** Gear Motor, **Bibby** Turboflex, **Boston** Gear, **Delevan**, **Delroyd** Worm Gear, **Formsprag** Clutch, **Guardian** Couplings, **Huco**, **Jacobs** Vehicle Systems, **Kilian**, **Kollmorgen**, **Lamiflex** Couplings, **Marland** Clutch, **Matrix**, **Nuttall** Gear, **Portescap**, **Stieber**, **Stromag**, **Svendborg** Brakes, **TB Wood's**, **Thomson**, **Twiflex**, **Warner** Electric and **Wichita** Clutch.

CLASSIFICATIONS

For survey of the coupling by a classification society, the regulations of the society have to be adhered to. The coupling characteristics may differ from the definitions given in this catalogue. Accordingly prepared data sheets are available on request.

A number of classification societies prescribe fail-safe devices on ships main drives.

TORQUE RANGE

- 6600 up to 22,500 Nm

INSTRUCTION FOR THE DESIGNER

All metal parts of the Stromag Vector® Coupling are made of steel or GGG.

The individual rubber elements can be mounted radially and can be connected to the coupling parts by bolted joints. The transmitted torque causes a tensile strain in the elements which is absorbed by the vulcanized nylon fabric inserts. Smooth running by coupling operation and less rotating radial forces are obtained by selection and arrangement of the single rubber elements according to their tensile characteristic curve.

Suitably stored, rubber flexible elements maintain their characteristics for several years without change. The parts need to be stored against oxygen, ozone, heat, light, moisture and solvents. The temperature in the store should be between +10°C und +25°C.

The relative humidity should not exceed 65%. Further details can be taken from DIN 7716 and ISO 2230.

Stromag – Flexible Couplings

COUPLING AT A GLANCE

The new Stromag Vector® coupling represents the next logical and consistent step in the evolution of our tried and tested GE rubber fabric coupling – a flexible coupling that has become successfully established on the market.

The new Vector® coupling concept is based on the experience we have gained from the most diverse application fields.

The result is a coupling that connects two shafts free of backlash. The coupling features a radial arrangement of segments in a compact design. This facilitates installation

and removal without the need to displace the drive units.

The capability of the highly flexible Stromag Vector® coupling to displace in all directions makes it ideal for applications on engines mounted on both rigid and flexible bearings. The coupling also exhibits progressive characteristics for the optimal configuration of the drive unit's vibration behaviour.

Our experts will support you by TVA torsional vibrations analysis for your drivetrain.

What can the Stromag Vector® do for you?

It is very compact because its rubber-fabric elements exhibit a high power density

It minimizes your costs because the special rubber-fabric elements enhance the service life of the Vector® coupling

It saves valuable working time because the elastomer elements radial mounting facilitates installation and removal without the need to displace the machine

It adjusts to your needs because it can displace in all directions and can be installed easily on engines mounted on both rigid and flexible bearings

Add on features compact design - outstanding ventilation - zero backlash - reduced installation times - low reactive forces

Technical data

Vector coupling size	Nominal torque T_{KN} Nm	Maximum torque		Adm. alternating torque T_{Kw} Nm	Adm. Speed n_{max} min ⁻¹	Adm. axial displacement ΔK_a mm	Axial stiffness C_a kN/mm 3) 4)	Adm. radial displacement ΔK_r mm 7)
		T_{Kmax1} Nm 1)	T_{Kmax2} Nm 2)					
V...20	6600	13200	19800	3300	2300	8	0,56	4
V...30	9900	19800	29700	4950	2300	8	0,84	4
V...40	15000	30000	45000	7500	1800	9	0,85	5
V...50	22500	45000	67500	11300	1800	9	1,3	5

1) for transient repetitive vibrations during start / stop, clutching etc.

2) for rare occasional peak loads, e. g. short circuits in generators

3) Tolerances until $\pm 15\%$ related to the material are possible.

4) At torque T_{KN}

5) For: $T_w = 0.2 \cdot T_{KN}$; $f = 10 \text{ Hz}$; $\vartheta = 30^\circ\text{C}$

THE TORSIONAL VIBRATION ANALYSIS

Stromag's Know-how in Torsional Vibration Analysis (TVA) constitutes the core of each coupling design. It provides a comprehensive analysis of loads in the crankshaft, coupling and driven side to ensure that no critical speeds occur during operation. Unevenly rotating systems can severely degrade product quality and cause great harm to the powertrain. On a daily basis, the TVA experts at Stromag work on the challenge of detecting such deviations by measuring them and protecting the entire powertrain with ideal product selection. Stromag is capable of calculating stationary and transient operating conditions considering the stiffness and damping of the elastomers.

Adm. radial displacement	Radial stiffness	Torsional stiffness, depending on the preload					Relative damping	Adm. dumping power
$\Delta K_{r, \max}$ mm	C_r kN/mm 3) 4)	$C_{1, \text{dyn}}$ kNm/rad 3) 5)					Ψ 3) 5)	$P_{KV 60}$ 8)
		$T_{KN} \leq 0$ 6)	$0,2 \times T_{KN}$	$0,4 \times T_{KN}$	$0,8 \times T_{KN}$	$1,0 \times T_{KN}$		
8	1,6	24	62	144	206	234	0,8	840
8	2,4	36	93	216	310	352	0,8	1260
10	2,6	48	138	364	527	610	0,8	1000
10	3,9	72	207	546	790	915	0,8	1500

6) This value is constant for the torque range from 0 to $-0,3 \cdot T_{KN}$

7) At $n_{\max} = 600 \text{ rpm}$, for higher speed ratings:

$$\Delta K_r(n) = \sqrt{\frac{600 \text{ min}^{-1}}{n}} \cdot \Delta K_r$$

8) The value $P_{KV 60}$ describes the damping power to be absorbed over 60 minutes. Permanently absorbed damping power

$$P_{KV \infty} = 0,5 \cdot P_{KV 60}$$
